QUELQUES NOTION DE NOMENCLATURE

COURS N°2

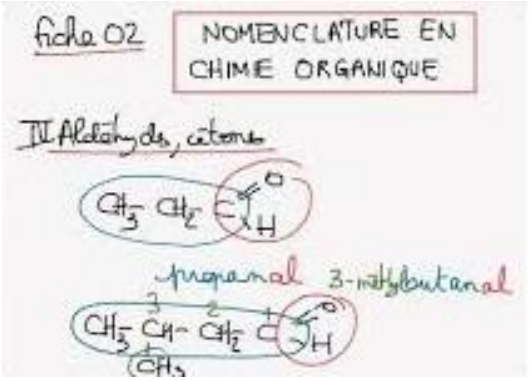

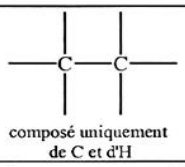

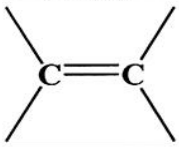

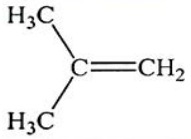

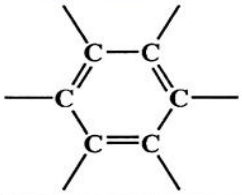

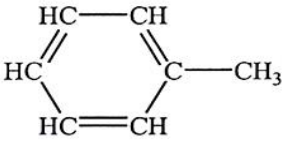

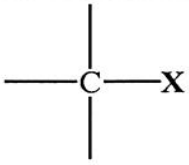

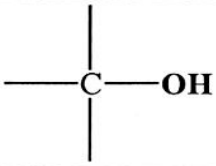

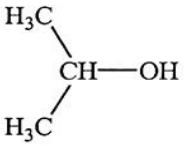

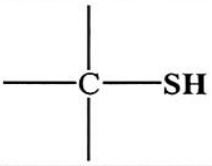

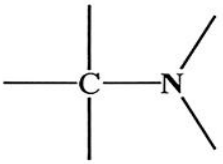

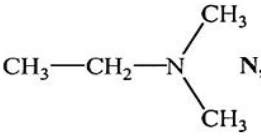

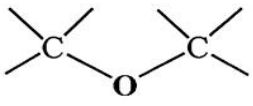

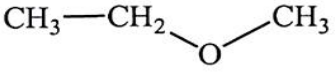

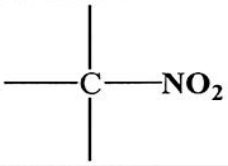

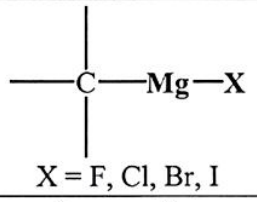

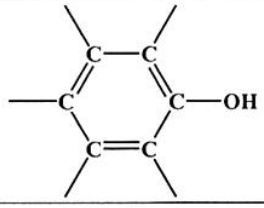

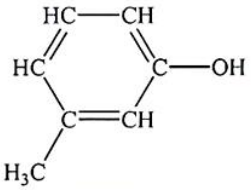

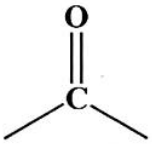

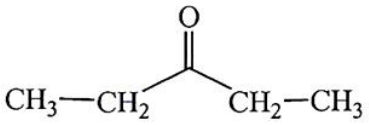

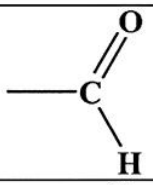

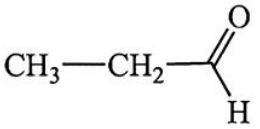

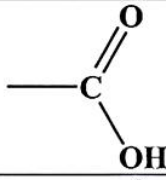

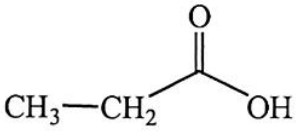

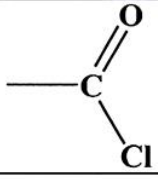

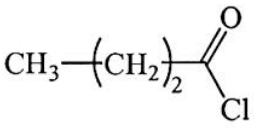

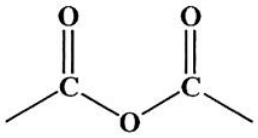

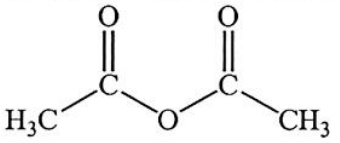

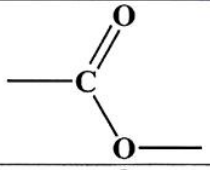

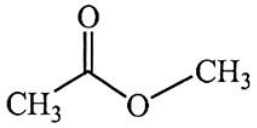

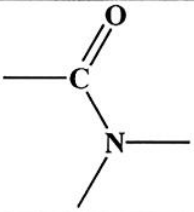

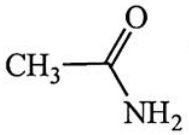

Table des matières

Fonctions a reconnaitre 2
Fonctions contenant Carbones, Hydrogènes 4
Fonctions contenant Carbones, Hydrogènes, Oxygènes 4
Fonctions contenant Carbones, Hydrogènes, Oxygènes, Azotes 5
Fonctions contenant Carbones, Hydrogènes, Oxygènes, Azotes, Soufres et Métaux 6

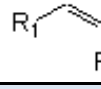

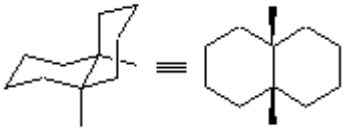

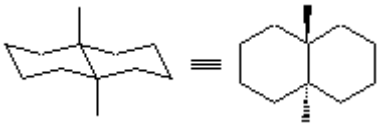

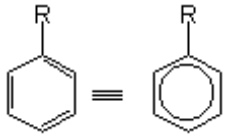

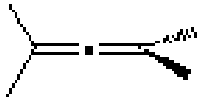

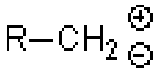

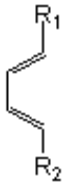

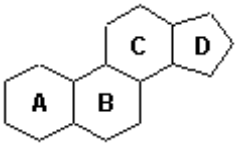

FONCTIONS A RECONNAITRE

Famille	Structure générale	Exemple Nomenclature
Alcane	 composé uniquement de C et d'H	$CH_3 - CH_2 - CH_2 - CH_3$ butane
Alcène		 2-méthylpropène
Alcyne		 Hept-3-**yne**
Arène		 méthylbenzène toluène
Halogénure	 X = F, Cl, Br, I	 **iodo**éthane
Alcool		 Propan-**2-ol**
Thiols		éthane**thiol**
Amine		 **N,N**-diméthylméthan**amine**
Ether Ether-oxyde		 méth**oxy**éthane
Nitroalcane Composé nitré		 **nitro**propane

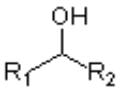

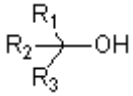

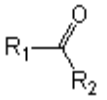

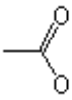

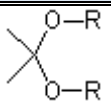

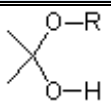

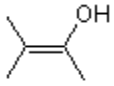

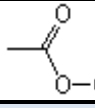

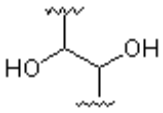

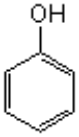

Famille	Structure générale	Exemple Nomenclature
Organomagnésien		$CH_3—Mg—Cl$ chlorure de méthyle **magnésium**
Phénol		 3-méthyl**phénol** m-méthyl**phénol** *(orhto, méta, para)*
Cétone		 pentan-3-**one**
Aldéhyde		 propan**al**
Acide carboxylique		 **acide** propan**oïque**
Chlorure d'acide		 **chlorure** de butan**oyle**
Anhydride d'acide		 **anhydride** éthan**oïque**
Ester		 éthan**oate** de méthyle
Amide		 éthan**amide**
Nitrile		$CH_3—C\equiv N$ éthane**nitrile**

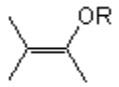

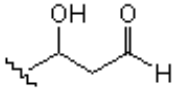

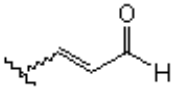

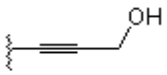

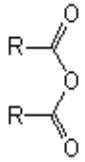

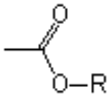

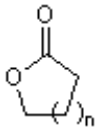

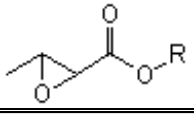

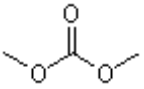

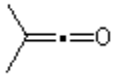

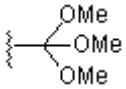

Voici une liste, non exhaustive, des différentes fonctions que l'on peut rencontrer en chimie organique. Bien sûr, une même molécule peut contenir plusieurs de ces fonctions. La liste suivante, ne s'intéressera donc qu'au groupement donnant le nom à la fonction, on ne tiendra pas compte ici du reste de la molécule.

FONCTIONS CONTENANT CARBONES, HYDROGENES

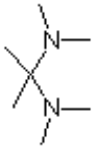

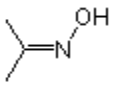

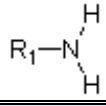

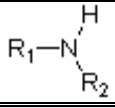

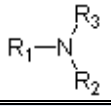

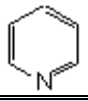

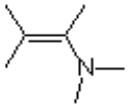

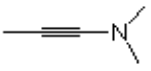

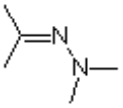

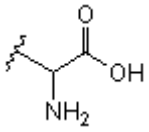

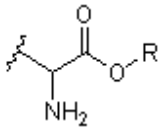

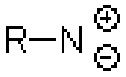

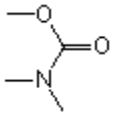

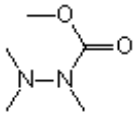

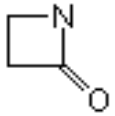

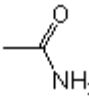

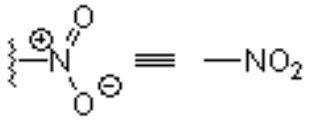

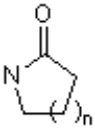

alcènes Z (ou cis)	alcènes E (ou trans)	alcynes disubstitués	alcynes vrais (ou terminaux)
			
décaline cis	**décaline trans**	**hydrocarbures aromatiques benzéniques**	
		 notation à éviter	
allènes	**carbènes**	**diènes**	**squelette des stéroïdes**
			
cyclohexane : forme chaise	**cyclohexane : forme chaise inverse (par rapport à la précédente)**	**cyclohexane : forme bateau**	
			

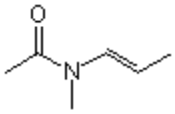

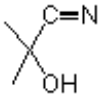

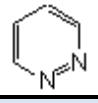

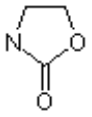

FONCTIONS CONTENANT CARBONES, HYDROGENES, OXYGENES

alcools primaires	alcools secondaires	alcools tertiaires	aldéhydes
			
cétones	**acides carboxyliques**	**acétals**	**hémiacétals**
			
énols	**éthers**	**peracides**	**peroxydes**
			
diols	**phénols**	**alcools allyliques**	**alcools homoallyliques**
			

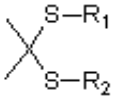

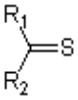

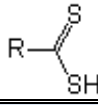

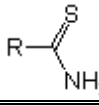

éthers d'énols	aldols	crotonaldéhydes	alcools propargyliques
			
anhydrides d'acides	**esters**	**lactones**	**époxydes**
			
oxétanes	**esters glycidiques**	**carbonates**	**cétène**
			
orthoesters			
			

FONCTIONS CONTENANT CARBONES, HYDROGENES, OXYGENES, AZOTES

aminals	oximes	nitriles	imines
			
amines primaires	**amines secondaires**	**amines tertiaires**	**pyridine**
			
enamines	**ynamines**	**hydrazones**	**aminoacides**
			
aminoesters	**isocyanates**	**nitrènes**	**carbamates**
			
carbazates	**hydrazine**	**oxaziridines**	**□-lactames**
			
□-lactames	**amides**	**groupe nitro**	**lactames**
			

énamides	cyanohydrines	pyrimidine	hydropyrimidine
			
pyrazine	**pipérazine**	**imidazoline**	**pyridazyne**
			
aziridines	**azétidines**	**pyrrolidine**	**pipéridines**
			
oxazole	**oxazoline**	**oxazolidine**	**oxazolidinone**
			
imidazole		**pyrrole**	
			

FONCTIONS CONTENANT CARBONES, HYDROGENES, OXYGENES, AZOTES, SOUFRES ET METAUX

dérivés halogènés X={I, Br, Cl, F}	organomagnésiens mixtes	organomagnésiens symétriques	chlorures d'acides
			
thioacétals	**thiols**	**thiones**	**thioacides**
			
dithioacides	**thioamides**	**isothiocyanates**	
			
silènes	**silanones**	**sililènes**	
			
organolithiens	**organozincites**	**Organocuprates (le métal peut être Li ou MgX)**	**alanes**
